

# Shocker

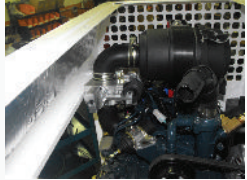

POSITIVE AIR SHUTOFF SYSTEM

# PASS

## Modular Design • Next Day Shipping • First Class Support

Truck Mounted Air Compressor

Cat CT15

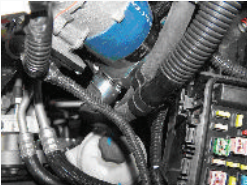

GMC Duramax

Ford 6.7 Liter

Dodge 6.7 Liter

### What is it?

The Shocker PASS is a solenoid actuated air supply shut-off system. It cuts off the air supply to the engine when initiated resulting in shutdown when exposed to a fuel charged atmosphere.

### Why you need it!

For anyone who works in or around natural gas or propane and owns a diesel engine, the Shocker Positive Air Shutoff System is a necessity. If there is a leak of natural gas or propane your diesel engine will rev until it explodes, even if you turn the key off. A diesel engine does not require electricity or a spark to run. As a result, it will burn the fuel in the atmosphere indefinitely. The only way to stop this is to shut off the air supply.

### Why choose our valve?

- One piece billet aluminum body
- In-Cab Military Style switch with lockout guard OR test/trip pad
- Solid State Relay controlled
- Enclosed torsion actuation spring
- Single 1/4 turn reset knob OR auto reset option
- Stringent quality control - each unit is hand tested
- Complete installation manual with each kit
- Liability insurance up to \$5,000,000
- Installation services available, in-house mobile
- Made in Alberta

### Available Options

- Automatic Rev Limiter
- 12v, 24v or Pneumatic solenoid
- Speed Sensor
- Instabead
- Reset extension handle

### Where do you need it?

- Bulk fluid transportation
- Oilfield maintenance equipment
- Mining
- Emergency vehicles
- Airport support equipment
- Rental equipment
- Power generation equipment
- Landscape equipment
- Marine engines
- Landfill equipment
- Portable welders
- Pipeline equipment
- Cranes
- Fuel haulers
- And much more!
